

Properties of relations

Properties of a relation on A :

Reflexivity R is *reflexive* if

$$\forall x \in A. xRx.$$

“Everyone likes themselves.”

Every node in G has a loop.

Irreflexivity R is *irreflexive* if

$$\neg \exists x \in A. xRx.$$

“No one likes themselves.”

There are no loops in G .

Symmetry R is *symmetric* if

$$\forall x, y \in A. xRy \Rightarrow yRx.$$

“If x likes y , then y likes x .”

If there is an edge from x to y in G , then there is an edge from y to x in G as well.

Antisymmetry R is *antisymmetric* if

$$\forall x, y \in A. (xRy \wedge yRx) \Rightarrow x = y.$$

“No pair of distinct people like each other.”

There is at most one directed edge between any pair of distinct nodes.

Transitivity R is *transitive* if

$$\forall x, y, z \in A. (xRy \wedge yRz) \Rightarrow xRz.$$

“If x likes y and y likes z , then x likes z too.”

For any walk v_0, v_1, \dots, v_k in G where $k \geq 2$, $v_0 \rightarrow v_k$ is in G (and, hence, $v_i \rightarrow v_j$ is also in G for all $i < j$).
